

Change how we educate users of new technology to power diplomatic missions

Project Title	Change how we educate users of new technology to power diplomatic missions
Project Summary	Analyze, document, and improve the procedures used to host webinars used to efficiently deploy new software to US embassies and consulates.
Country	Germany
Country/Region of Focus	Europe and Central Asia

Project Description

Our office oversees the crowdsourced development of software that powers diplomacy among overseas missions. We currently run one or more webinars a month to communicate with our key contacts at individual posts or with a large (40-200 person) audience of users of our software. The technology we use to meet this need is badly dated and meets our needs poorly: Help us determine requirements for a future platform and help analyze new learning management and video streaming platforms available within the Department.

Required Skills or Interests

Skill(s)
Data analysis
Data visualization
Educational design
Infographic design
Research
